**Passive Lens:** Ideal if you weld with the same shade for long periods of time

**Auto-Darkening Lens:** Ideal if you switch between shades frequently for different types of welding or welding in varied environments

**Arc Sensors:** An increased number of arc sensors makes the lens more sensitive and provides better lens response

Viewing Area: Larger viewing areas tend to be better for out of position or all-day use because they improve peripheral vision

ClearLight<sup>m</sup> Lens Technology: Ideal if you want to see the detail of your weld more clearly and with more natural colors

AutoSense<sup>™</sup>: Automatically sets your helmet sensitivity by sensing your welding environment

X-Mode<sup>™</sup>: Ideal if you frequently weld outdoors or out of position and want to ensure your lens darkens and lightens accurately

Cut & Grind Mode: Ideal if you frequently switch between welding, cutting or grinding

**Grind Button:** Easily transition from welding to grinding with the touch of a button

**Grind Shield:** Large clear viewing area ideal for frequent grinding and for keeping eyes protected in between welds

InfoTrack<sup>™</sup> 2.0 Data Monitoring: Makes it easy to track arc time and arc count for improving productivity and more accurately quoting projects
